DETAILED ACTION

Drawings

1. Figures 6 and 7 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 4 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 4 and 6; the phrase "saddle type bracket" renders the claim(s) indefinite because the claim(s) does not specify what feature of the bracket is of the type similar to a saddle, thereby rendering the scope of the claim(s) unascertainable.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Patent Document No. 9-254821 to Kato.

Kato discloses a pedal bracket structure comprising a bracket 22, a toe board 20, a lever 18, a pivot 28, a rigidity supplementing portion 26-2 formed in the front end portion of the bracket, and a brittle portion 26-2a formed at a rear side of said rigidity supplementing portion. The brittle portion is formed ahead of the pivot in a longitudinal direction of said bracket. The bracket has a rigidity increasing member between the pivot and a mounting portion 40 at the rear of the bracket, including a saddle-shaped switch bracket 32 fastened to the bracket; and a rigidity supplementing bracket 32 disposed between said saddle type switch bracket and said mounting portion, wherein the rigidity supplementing bracket is aligned with and fixed to said saddle type switch bracket. The rigidity supplementing portion is formed to swell and bead outwardly and the brittle portion is formed as a semi-circular shaped hole after impact, as seen in Figure 13.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art includes various deformable pedal brackets with rigidity supplementing portions, rigidity increasing members, and brittle portions, along with saddle-shaped switch brackets and rigidity supplementing brackets.
